

Helping Business' Save

MeterMate helps business' **save money** and **reduce their environmental impact**. From anywhere in the world, 24hrs per day, our clients can log on to see real-time :

Water Consumption Energy Consumption Greenhouse Gas (GHG) Production

To efficiently reduce the environmental impact of a business' activities an understanding of its water & energy use and greenhouse gas production is required.

MeterMate empowers environmental managers with the data required to make informed decisions.

Data collected by MeterMate's monitoring services can be used to:

- Identify water leaks, pipe bursts, unauthorized/unintentional water use etc.
- Identify water & energy consumption profiles which than can then be used to identify priority areas for environmental projects or to assess the impacts of environmental initiatives
- Provide a basis for setting water use, energy use and greenhouse gas production targets
- Justify environmental initiatives and calculate pay-back periods
- Compare the water & energy efficiency of different sites, processes, equipment etc.

Features of MeterMate's monitoring services include:

- Secure multi-level/multi-user logins and data storage & handling
- Regular, automated email reports
- Alarms etc. via SMS and/or email
- Easy to use web-interface featuring graphs, tables, summary statistics etc.
- Fully automated data collection, storage, handling and analysis
